About Archon Secure and GoSilent Cube

Archon Secure enables secure, mission-critical communications from anywhere, at any scale. Providing both hardware and data services, Archon's solutions are customizable, rapid time to value, manageable, scalable, and NSA-compliant. In its partnership with Thuraya, Archon will provide Thuraya's customers safe and secure channels for broadband communications, further expanding Thuraya's portfolio of superior and easily deployable solutions.

The GoSilent Cube is the smallest and lightest hardware IPSEC VPN and firewall device available and enables secure communications from anywhere. GoSilent Cube is National Information Assurance Partnership (NIAP) protection profile compliant and listed on the NSA's Commercial Solutions for Classified Program (CSfC) Program Component List.

How does it work

The Archon GoSilent Cube easily connects to any Thuraya broadband terminal with minimal configuration and provides effective security for data transfers. Using the GoSilent Cube's intuitive interface, users can easily connect their mobile devices and data communication kits and take advantage of a true, end-to-end encrypted link between remote devices and enterprise or tactical servers across the world. Once a broadband terminal has connected and encrypted data shared, the service at the other end of the terminal decrypts and shares the data with the end user. Additionally, the Archon GoSilent Cube provides enhanced security features, including captive portal isolation for protection against network hacking, identity theft, malware, cookies, and location trackers. The quick and easy setup process requires no software downloads, which not only makes installation and maintenance easier, but also removes the need for constant IT support. The GoSilent Cube can also provide enhanced connectivity, regardless of the connection type, including public ethernet or Wi-Fi networks, LTE, satellite, and radio.

Who uses this solution?

The target audience for the Archon GoSilent Cube is Department of Defense agencies, senior leaders, special operations, and intelligence agencies. The solution's secure nature also makes it the ideal solution for embassies, diplomatic missions, and government departments. The GoSilent Cube also plays a key role in the transportation sector and enables secure communications between airports, seaports, railways and logistical operations. The Cube is a key enabler in mission critical assignments for both UN and non-governmental organizations (NGOs).

Geographically, the main priorities for this partnership include the Middle East, the US, Europe, NATO and Australia with a focus on governments, NGOs, UN bodies and oil and gas companies.

Thuraya broadband terminals certified to work with Archon GoSilent Cube

Thuraya IP Commander, Thuraya IP+, Thuraya IP Voyager, Thuraya Orion IP and Thuraya MCD Voyager
