About PITS

PITS is a dynamic force at the intersection of GPS tracking platforms and networking solutions it has emerged as a leader in providing advanced tracking solutions that embody a commitment to accuracy, efficiency, and customer-centric excellence.

The areas that the company serves through smart tracking technology are many such as: Vehicle Tracking System, Field Task Management System, Smart School Bus and Asset tracking

SPACE42 and PITS have partnered to deliver a seamless satellite-based tracking solution by integrating the Thuraya T2M DUAL tracker with the PITS tracking platform. This collaboration provides real-time monitoring and asset management capabilities for industries requiring reliable connectivity in remote and challenging environments.

How It Works with Thuraya?

- The Thuraya T2M DUAL tracker is a robust asset monitoring device that operates via Thuraya's satellite and GSM networks.
- It seamlessly transmits location, telemetry, and operational data to the PITS tracking platform in real time.
- Users can access the platform's advanced features, including geofencing, alerts, and analytics, ensuring enhanced security and operational efficiency.
- The dual-mode capability (satellite + GSM) ensures continuous connectivity, even in areas with no terrestrial network coverage.

Who uses this solution?

- Fleet Management – Ensuring real-time visibility of vehicles and trucks in remote locations.
- Oil & Gas – Tracking equipment and workforce in remote drilling and exploration sites.
- Logistics & Supply Chain – Securely managing cargo movement and preventing theft.
- Government & Defense – Enhancing situational awareness for mission-critical operations.

Terminals Supporting the Solution

- Thuraya T2M DUAL – A hybrid GSM-satellite tracker, ideal for global asset tracking.
